

Collaborative Solutions for Outbreak Response and Prevention in Healthcare Settings

Cassandra Mohan, MSPH
Research Associate

Seun Aluko, MPH
Lead Research Scientist

Question for the Viewers

Where are you joining us from today?

- A. Local Health Department
- B. State Health Department
- C. Tribal Health Department
- D. National Public Health Organization
- E. Non-profit or Academic Institution
- F. Other (please type in chat)

Question for the Viewers

How long have you been conducting outbreak response and prevention work in healthcare settings?

- A. Less than 1 year
- B. 1-2 years
- C. 3-5 years
- D. 6-10 years
- E. 10+ years
- F. I do not conduct outbreak response and prevention work in healthcare settings
- G. Other (please type in chat)

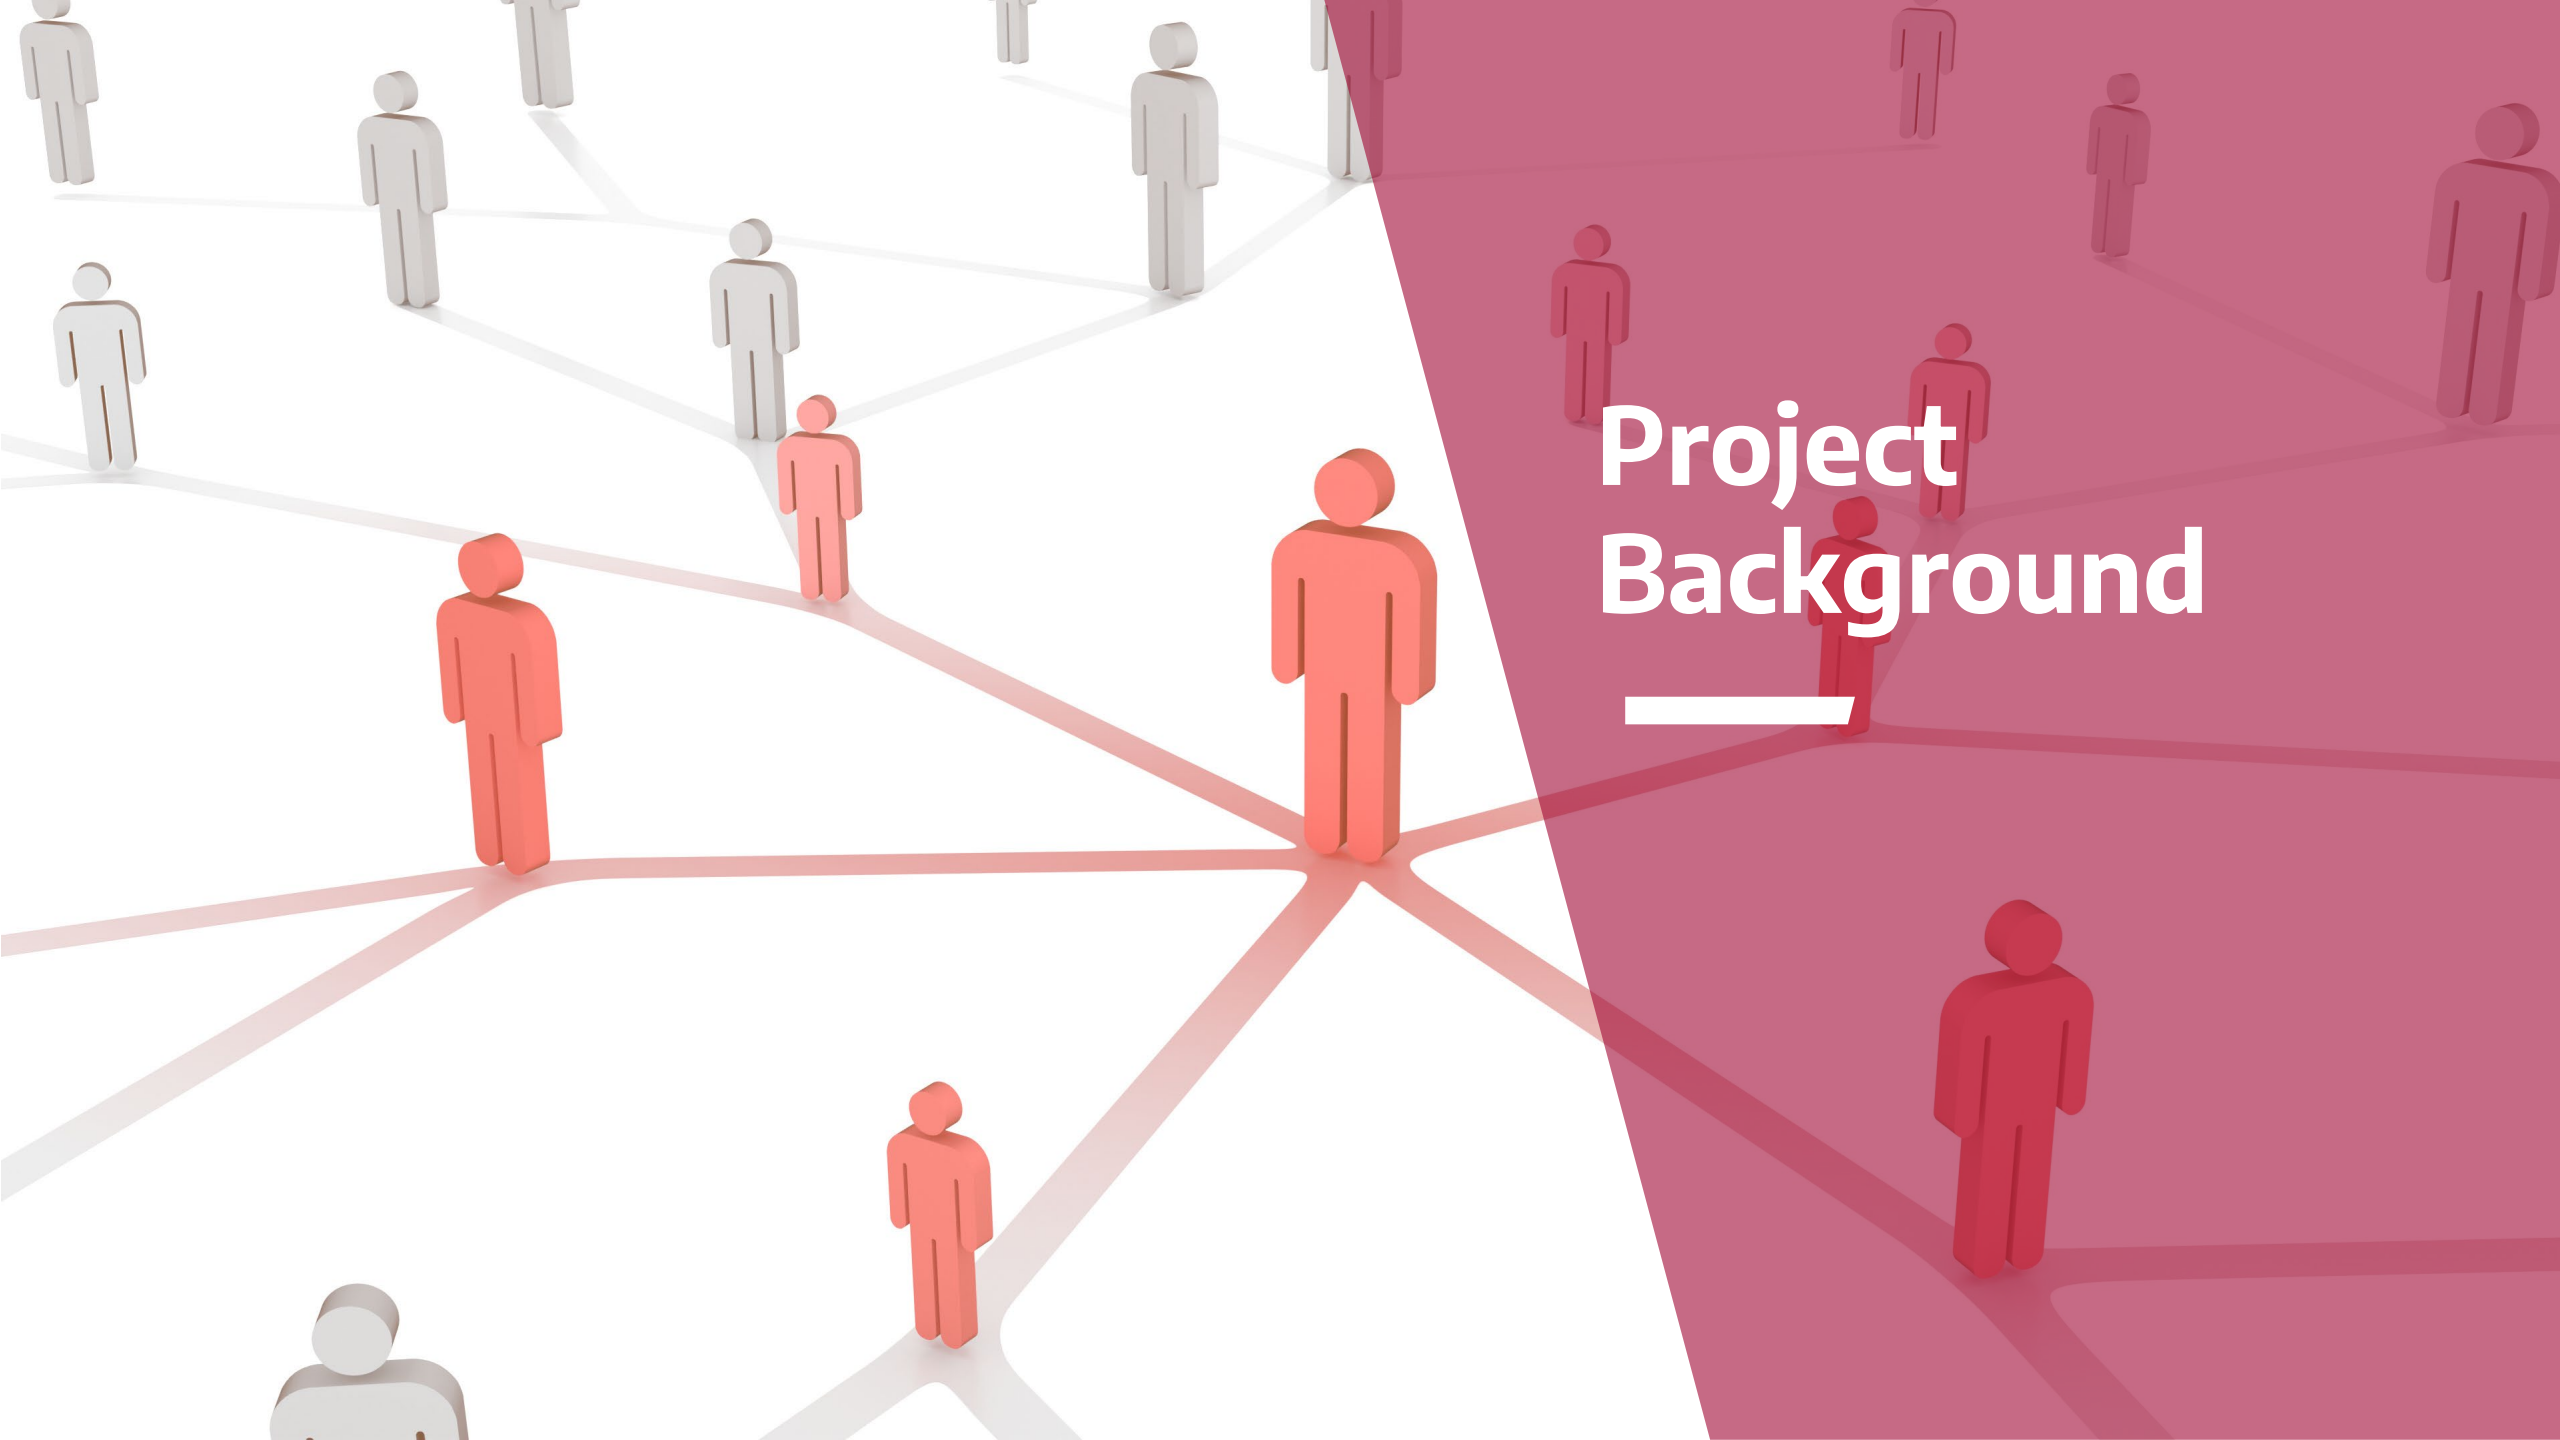

Project Background

Health Equity Key Concepts

Data Collection and Metrics

Applying the Equity Framework

Project Background

The Population Health Innovation Lab (PHIL) provides innovative training, research, and technical assistance designed to catalyze and accelerate community efforts aimed at enhancing equity, well-being, and systems through cross-boundary collaboration.

Project Background

Purpose

To support Local Health Departments in harnessing data for effective and equitable outbreak response and prevention in healthcare settings

Project Phases

Phase 1 – Qualitative Evaluation (2023)

Phase 2 – Resource Development & Trainings (2024)

Phase 1 Evaluation Recommendations

Strengthen Partnerships

NACCHO can support regular forums or meetings among LHDs, state health departments, local partners, and healthcare facilities to leverage collective capabilities, insights, and resources towards synergized outbreak responses.

Expand LHD Capacity

NACCHO can find ways to support LHDs in accessing essential resources, e.g., funding, technology, and expertise, especially to enhance personnel capacity for smaller LHDs.

Support Improvement of State-Level Disease Surveillance Systems

NACCHO and partners can encourage state departments of health (DOH) to regularly review and update end user training materials to improve the user experience of their electronic disease surveillance and reporting systems.

NACCHO can also organize a repository for states' point of contact, such that LHDs, specifically those that are smaller or rural, can inquire about guidance, resources, facilitations, or training.

Phase 1 Evaluation Recommendations

Address Access Barriers

State DOHs should implement processes to simplify and expedite processes to access essential data portals and systems to facilitate smoother operational workflows and strengthen outbreak response mechanisms

Facilitate Training

NACCHO can facilitate diverse trainings for LHDs and supplement them with resources to support learning and application of acquired skills in outbreak responses.

Emphasize Equity

NACCHO can support LHDs in leveraging data to develop equity-driven interventions that provide at-risk populations with appropriate resources and care during healthcare outbreaks.

Phase 2: Resource Development

Data Utilization and Management Guide

Strategic Collaboration Guide

Equity Framework Guide

Webinars & Workshops

Now available for download from the NACCHO website!

Home / Programs / Community Health / Infectious Disease / Outbreak Response and Prevention in Healthcare Settings Resources

Outbreak Response and Prevention in Healthcare Settings Resources

INTRODUCTION

NACCHO, in partnership with WE Public Health and the Population Health Innovation Lab (PHIL), a program of the Public Health Institute (PHI), has developed several resources to provide Local Health Department (LHD) staff with comprehensive strategies and tools for equitable and effective outbreak response and prevention in healthcare settings.

LHD staff new in their roles will particularly benefit from the HAI/AR Staff Competency and Training Workbook which is designed to equip LHDs with the skills to prevent, respond to, and monitor Healthcare Associated Infections and Antimicrobial Resistance (HAI/AR). This workbook offers LHDs a rich repository of relevant information, training, and resources, significantly expanding your capacity to combat HAI/AR.

The LHD Data Utilization and Management for Outbreak Response & Prevention in Healthcare Settings guide, Equity Framework for Outbreak Response and Prevention in Healthcare Settings guide, and Strategic Collaboration for Outbreak Response and Prevention in Healthcare Settings guide are excellent resources for new and experienced staff alike. These three guides work together to enhance LHD understanding of data utilization, health equity frameworks, and strategic collaborations for outbreak response and prevention in healthcare settings.

On this page you will find all four resources as well as webinars that explain how to use them.

FEATURED RESOURCES

- HAI/AR Staff Competency and Training Workbook: A Customizable Tool to Build Essential Skills
- LHD Data Utilization and Management for Outbreak Response and Prevention in Healthcare Settings
- Equity Framework for Outbreak Response and Prevention in Healthcare Settings
- Strategic Collaboration for Outbreak Response and Prevention in Healthcare Settings

Download the guides and open in Adobe Reader for best functionality.

| Pima County Health Department | AZ | West | Large | Local | County | Urban |
| Public Health – Seattle & King County | WA | West | Large | Local | County | Urban |
| Snohomish County Health Department | WA | West | Large | Local | County | Urban |
| Steuben County Health Department | IN | Midwest | Small | Local | County | Rural |
| South Carolina Department of Health and Environmental Control, Upstate Region | SC | South | Large | State | Multi-county | Urban |
| Washington County Public Health Division | OR | West | Large | Local | County | Urban |

Data Utilization and Management Guide: Contents

- The guide is organized into 5 main categories of data utilization and management topics.
- Categories are broken down into specific questions that are answered in the guide.

Example: “How can LHDs use data to identify and prioritize high-risk facilities for intervention?”

- The guide can be used in any order.

| | |
|---|----|
| Introduction and Purpose | 4 |
| Outbreak Reporting and Data Management | 5 |
| What Strategies Can LHDs Use to Collect Initial Outbreak Reports From Facilities? | 5 |
| What Systems and Tools Can LHDs Employ to Manage Outbreak Data? | 7 |
| How Can LHDs Use Data to Identify Unreported Outbreaks in Healthcare Facilities? | 10 |
| Infection Control Assessments and ICAR Tools | 13 |
| What Are ICAR Tools and When Are They Utilized? | 13 |
| Who Conducts Infection Control Assessments and Collects ICAR Data? | 15 |
| How Can ICAR Tools and Assessment Processes Be Streamlined for the Needs of the LHD? | 16 |
| How is ICAR Data Stored and Managed by LHDs? | 18 |
| Data-Informed Decision Making | 19 |
| How Can LHDs Use Data to Identify and Prioritize High-Risk Facilities for Intervention? | 19 |
| How Can LHDs Use Surveillance Data to Inform and Prepare Facilities? | 23 |
| Collaborating with Facilities and Increasing Engagement | 26 |
| How Can LHDs Use Data to Improve Collaboration and Engagement with Healthcare Facilities? | 26 |
| How Can LHDs Collaborate with the Facilities to Ensure They Are Receiving Quality Data and Protecting Sensitive Health Information? | 28 |
| Streamlining and Improving Internal Data Processes | 31 |
| How Can LHDs Streamline and Create Consistency in Their Internal Data Processes? | 31 |
| How Can LHDs Use Outbreak Metrics to Improve Preparedness and Response Capacity? | 32 |

What Systems and Tools can LHDs Employ to Manage Outbreak Data?

LHDs employ a variety of systems and tools to help manage the data collected during or after an outbreak investigation.

- ▶ Many LHDs use Microsoft Excel to record and manage outbreak information in the form of a line list. This line list is a case log that can include variables related to patient demographics, onset details, symptoms, and other outcomes. In addition to offering a simple and easily adaptable line list approach, additional features can be built into the Excel workbook to help generate Epi curves and run other analyses.
- ▶ For LHDs that want a streamlined data entry process and a more robust system that provides advanced organization and analysis of complex data, it can be beneficial to use a database program (such as Epi Info, Microsoft Access, and REDCap) to record and manage outbreak data.
- ▶ Some LHDs work with their local or state information technology (IT) team to create outbreak modules within their reportable disease case management system. This outbreak module can be an effective option to help streamline the management of case and outbreak data and may include additional variables, such as laboratory results, address, facility name, and close contacts.

Success Story: Creating Excel Line Lists for Outbreak Data Management and Analysis

Washington County Public Health Division in Oregon created an Excel spreadsheet where line list data can be entered, and an automated epi curve is created. This automated spreadsheet is a time saver for this LHD's staff, as they do not have to duplicate the manual data entry of illness onset information into another system to generate the epi curve.

In addition, Washington County Public Health Division developed a template for their outbreak close out report to help streamline the process and ensure that the same information is routinely captured across different outbreaks.

Outbreak Line List Resources

- ▶ Download the [line list template for gastrointestinal outbreaks](#) developed by Washington County Public Health Division.
- ▶ Download the [line list template for respiratory outbreaks](#) developed by Washington County Public Health Division.
- ▶ Access the [HAI program resources](#) provided by the California Department of Public Health, including downloadable line-list templates for COVID-19, MDRO, and CDI under the Outbreaks tab.

Strategic Collaboration for Outbreak Response and Prevention in Healthcare Settings

A Comprehensive Guide for Local Health Departments

Strategic Collaboration Guide: Contents

- The guide shares strategic collaboration guidance for outbreak response and prevention work in healthcare settings.
- There are 10 main topics to explore.
 - **Example:** *Resource Allocation and Management*
- The guide can be used in any order.

| | |
|---|----|
| Introduction and Purpose | 4 |
| Importance of Collaboration in Public Health | 5 |
| Role of LHDs: Roles and Responsibilities in Outbreak Response | 6 |
| Establishing Effective Partnership | 10 |
| Maintaining and Strengthening Partnerships | 11 |
| Communication Strategies | 13 |
| Resource Allocation and Management | 14 |
| Data Management and Surveillance | 16 |
| Operationalizing an Equitable Outbreak Response | 18 |
| Rapid Response and Flexibility | 20 |
| Sustainable and Resilient Partnerships | 22 |
| Conclusion | 24 |
| Acknowledgments | 25 |
| Appendices | 26 |
| Appendix 1: Collaboration Research, Theories, and Frameworks | 26 |
| Appendix 2: Training Modules for Partnership Development Skills | 33 |
| Appendix 3: Additional Resources | 34 |

Communication Strategies

Effective communication is essential for maintaining partnerships and ensuring successful implementation of outbreak response strategies. Newell et al. and Martin et al. highlight the importance of clear communication and conflict management in partnerships, particularly during high-stakes situations like outbreaks.²¹

This includes developing clear communication protocols, resolving conflicts that may arise, and ensuring equitable and inclusive partnership practices.

For more information on communication strategies, refer to [Appendix 1: Collaboration Research, Theories, and Frameworks](#).

Success Story: Enhancing Communication through Regular Meetings

The Long Beach Department of Health and Human Services (LBDHHS) strengthened their response to healthcare-associated infections by implementing effective communication strategies. LBDHHS holds weekly internal meetings to review outbreak data and provide targeted facility-specific guidance. Using Cisco Jabber for phone calls and Microsoft Outlook for email messaging, they maintain open communication with healthcare facilities. Microsoft Forms surveys are used to collect data on PPE and testing supplies, aiding in resource allocation. LBDHHS also customizes the CDC's Infection Control Assessment and Response (ICAR) tool, to reduce assessment time and allow for rapid report turnaround and to provide healthcare facilities immediate guidance for improvement in infection prevention and control practices. These communication strategies ensured effective coordination and support for healthcare facilities during outbreaks.

This success story demonstrates how robust communication strategies supported by strong partnerships and collaboration are vital to effective and timely outbreak response in healthcare settings.

Resources

To support your LHD's communication strategies with outbreak response partners, consider the following resources:

- ▶ [Access the CDC's Health Communication Playbook](#).
- ▶ [Building Community Resilience: Coalition Building and Communications Guide](#), a resource developed by the Center for Community Resilience at the George Washington University.
- ▶ [Communications Plan for Vulnerable Populations](#), a tool developed by the Escambia County Health Department in Florida.
- ▶ [Communications Annex](#), a resource developed by the Marion County Health Department in Florida.

| Appendix 4: References | 39 |

Health Equity Core Concepts

EQUALITY

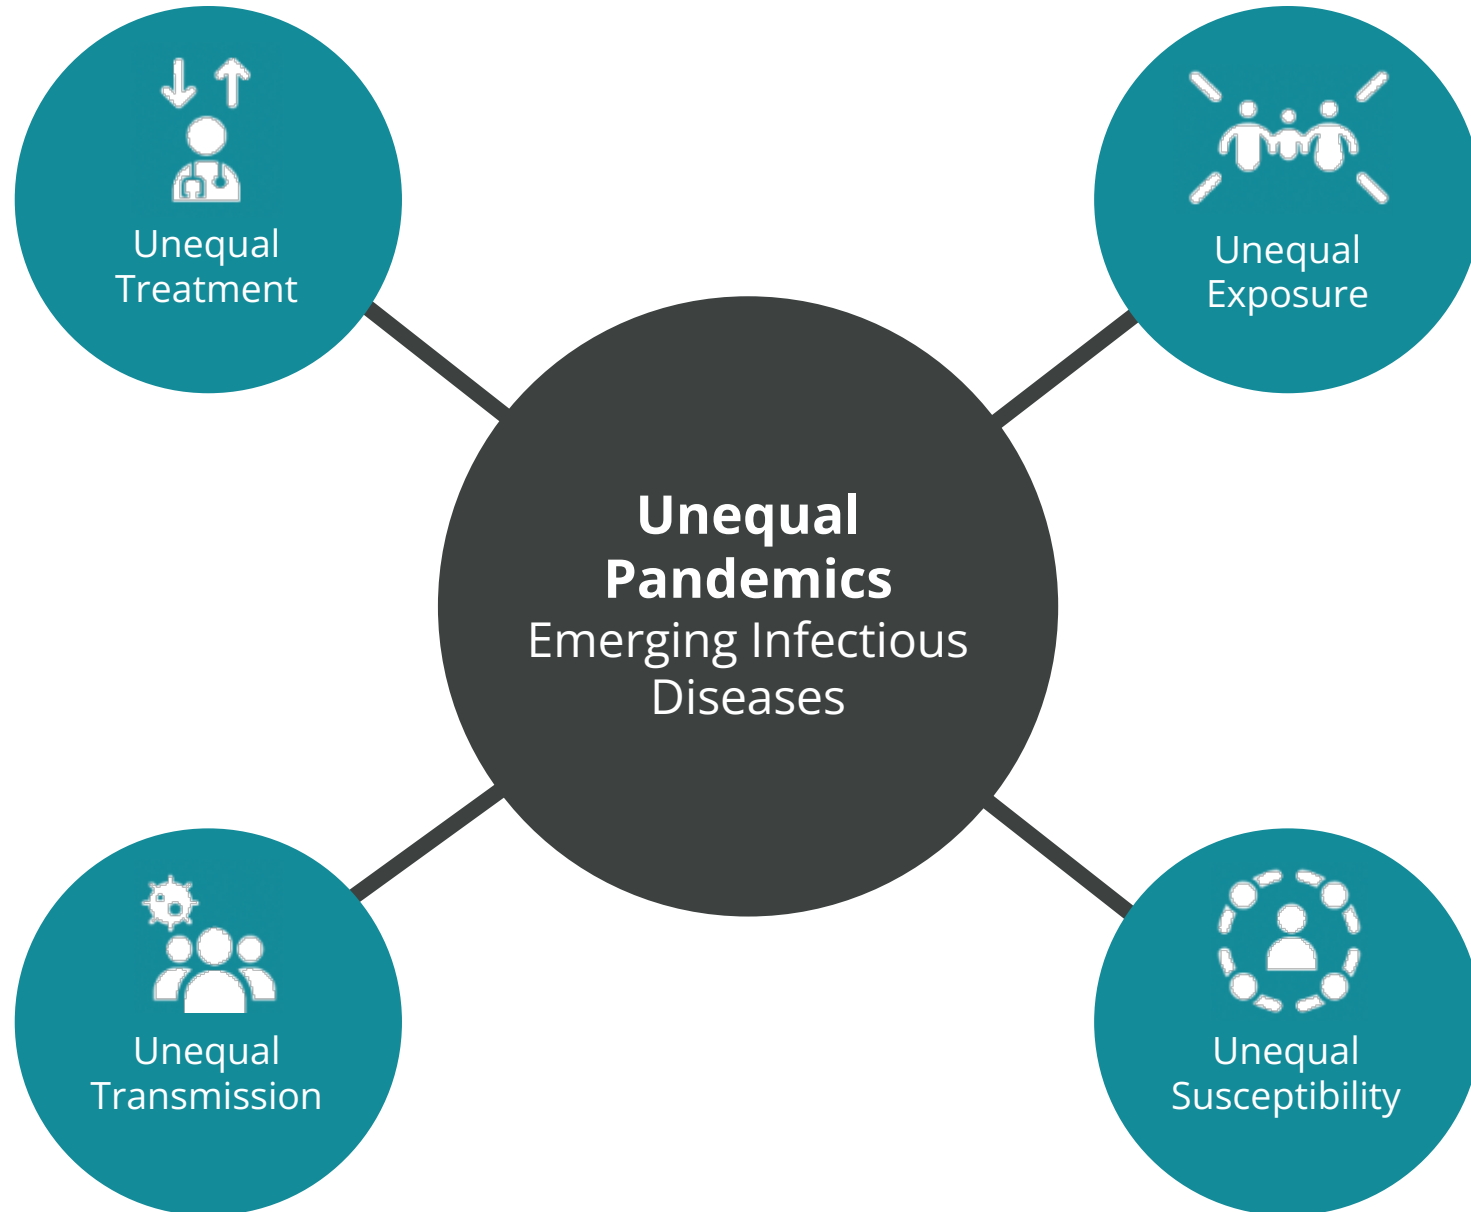

EQUITY

Social Determinants of Health

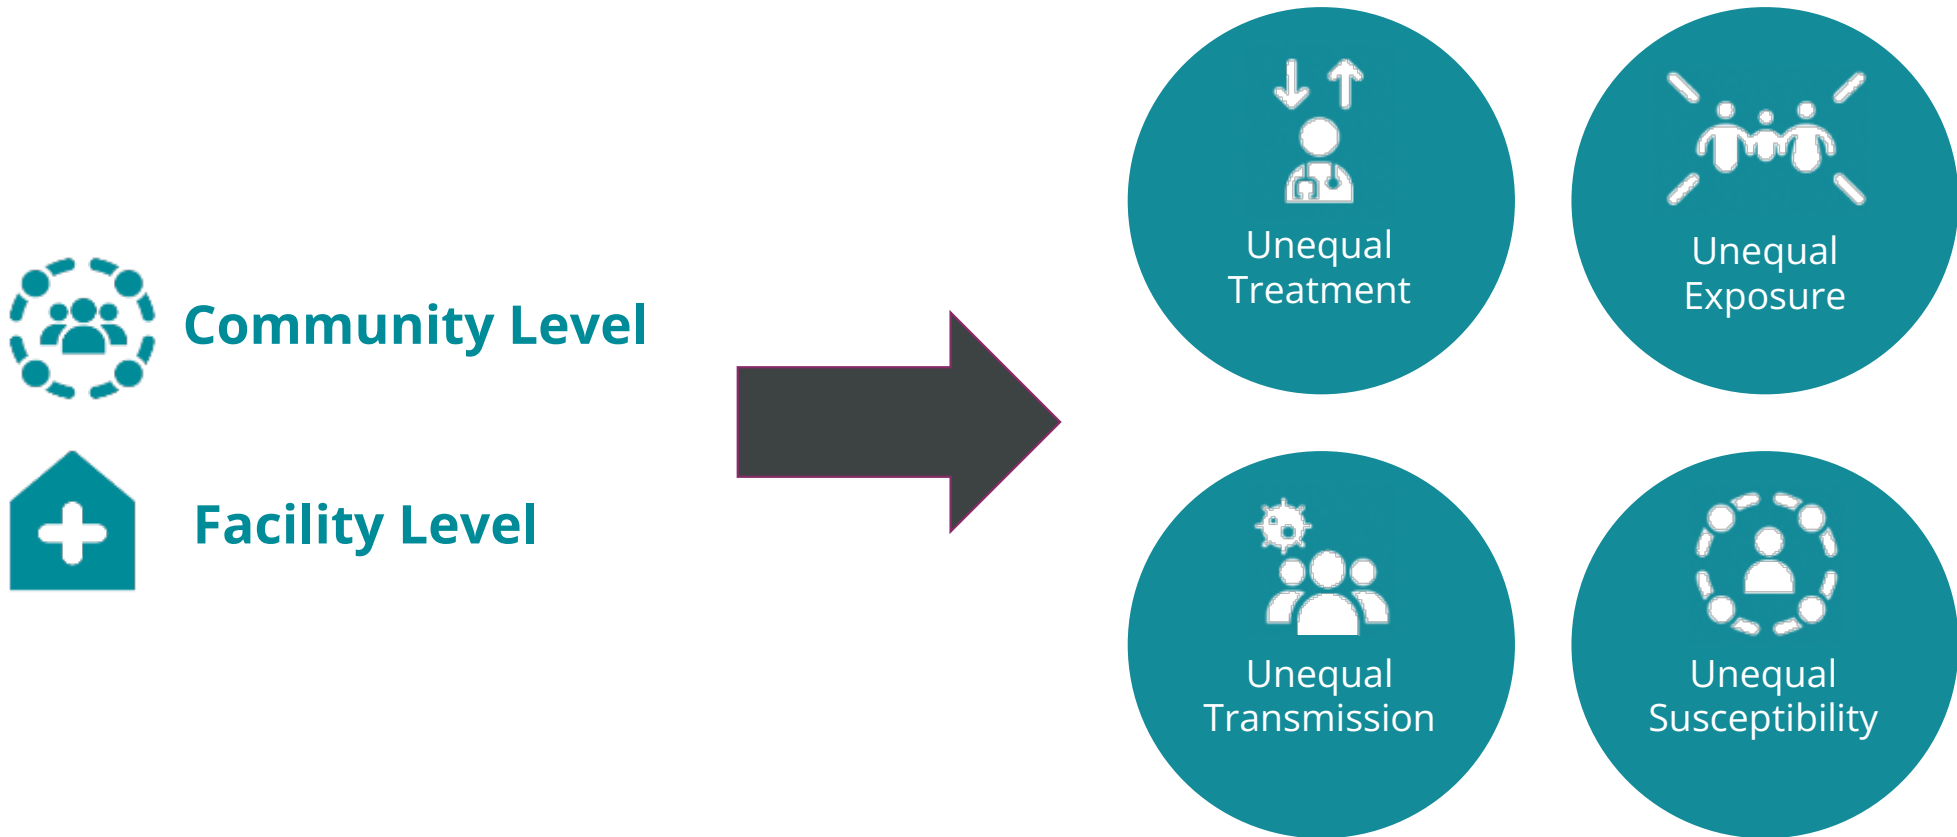

- CDC states that Social Determinants of Health (SDOH) are the non-medical factors that influence health outcomes.
- SDOH are the conditions in which people are born, grow, work, live, and age, and the wider set of forces and systems shaping the conditions of daily life.

Understanding and Addressing Inequities During Outbreaks

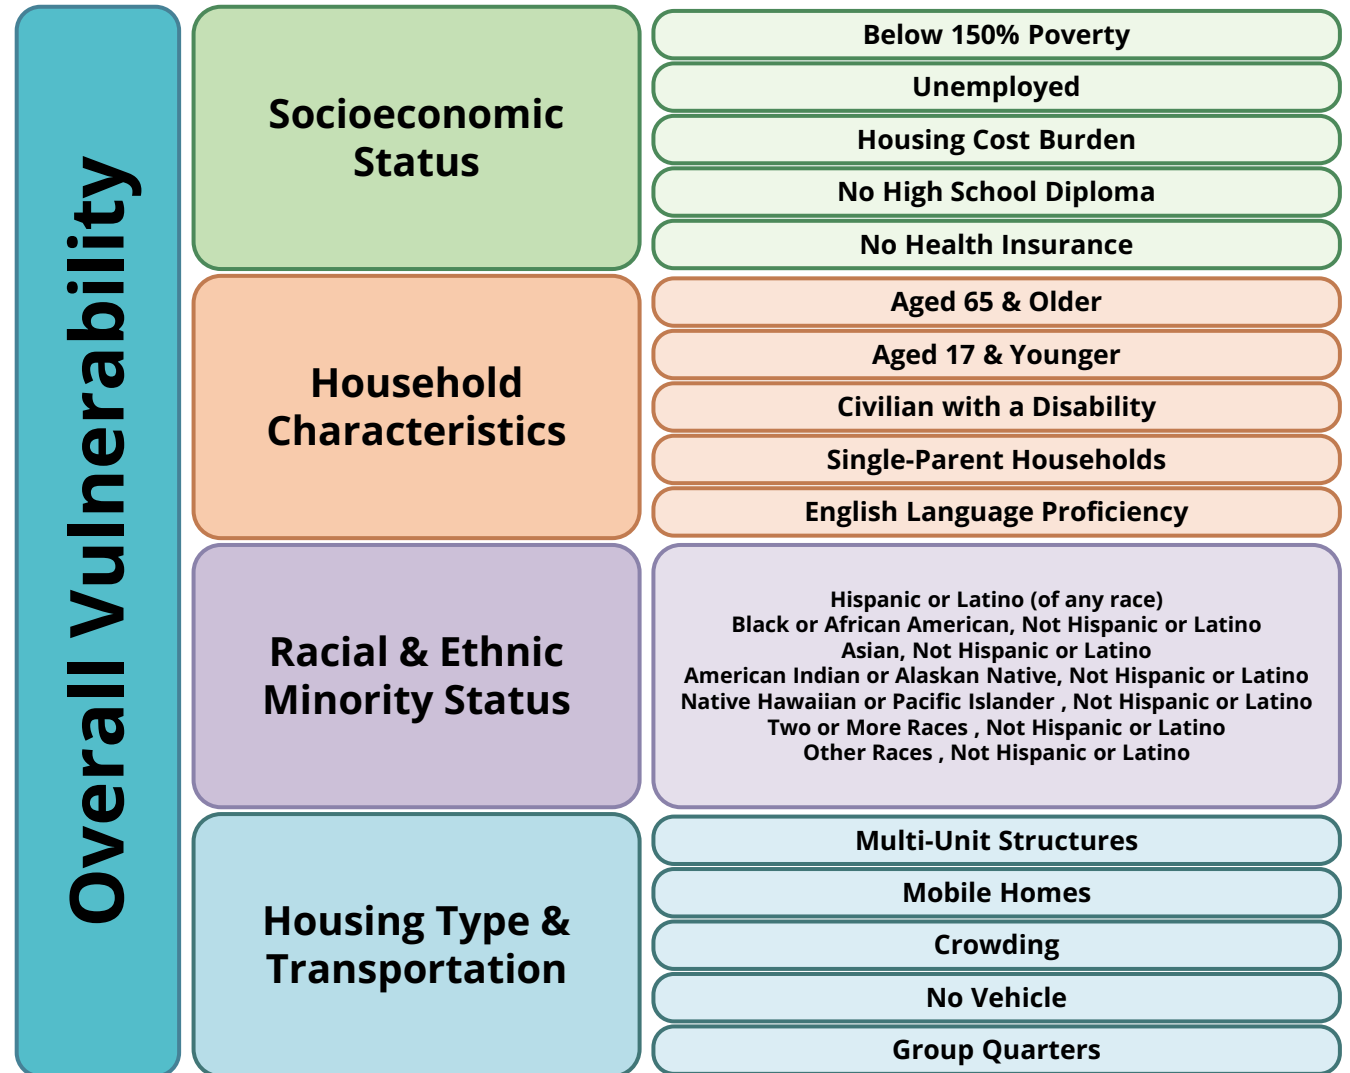

Impacts of Community and Facility Level Factors

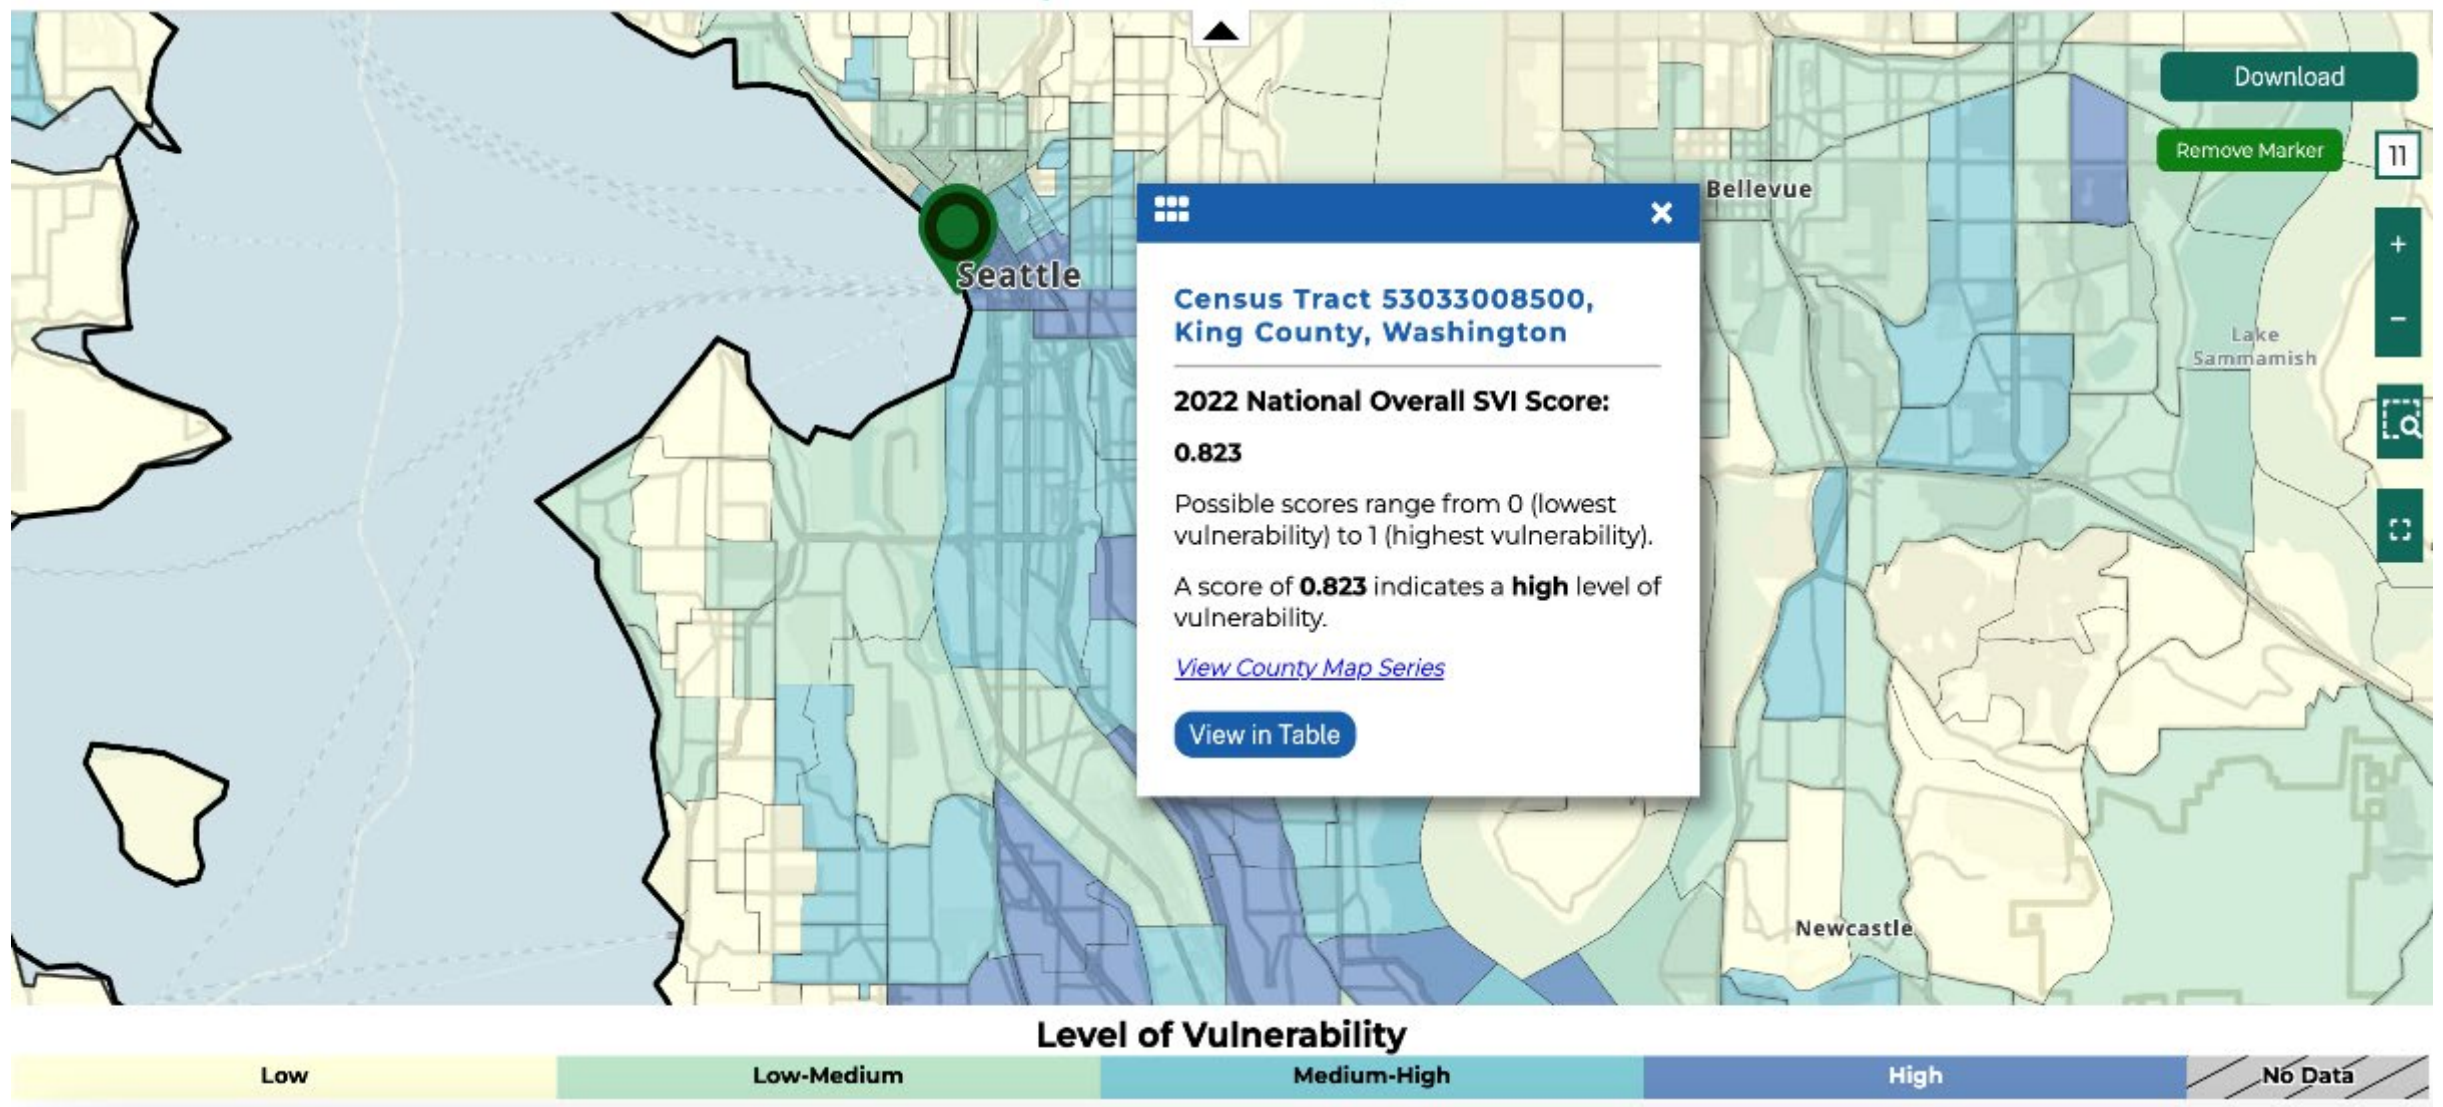

Social Vulnerability Index (SVI)

The current SVI metric developed by CDC/ATSDR uses 16 U.S. census variables to identify communities that may need support before, during, or after disasters or disease outbreaks (such as COVID-19).

Social Vulnerability Index Scores Across Seattle

Community-Level Factors in the Literature

Impact of SVI

During the COVID-19 pandemic, Michigan skilled nursing facilities within high SVI regions experienced greater shortages of personal protective equipment (PPE) and increased rates of COVID-19 cases and deaths (*LeRose et. al 2021*)

Facility-level Factors in the Literature: Impact of CMS Ratings and Staff Ratios

West Virginia nursing homes with higher CMS Overall Ratings (indicating higher quality) had significantly lower odds of experiencing COVID-19 outbreaks (*Bui DP et. al 2020*)

In **Pennsylvania hospitals**, lower nurse staffing ratios and higher nurse burnout were associated with increased rates of urinary tract infections and surgical site infections (*Cimiotti et. al 2012*)

LHDs Using Data to Identify and Prioritize High-Risk Facilities for Interventions

- South Carolina Department of Health, Upstate Region
- Monmouth County Health Department in New Jersey
- Chicago Department of Public Health in Illinois

→ *See pages 19 – 22 in the Data Utilization and Management Guide to read these Success Stories*

Question for the Viewers

Does your health department use facility-level or community-level data to inform outbreak prevention and response work in healthcare settings? (Select all that apply)

- A. Yes, we use facility-level data
- B. Yes, we use community-level data
- C. No, we do not currently use facility-level or community-level data
- D. Unsure
- E. I do not work at a health department

Community-Level Metrics

Table 1. Standardized Data and Metrics for Equity Indicators

| Category Level | Standardized Metrics |
|---|---|
|  Community Level Community-level data and metrics help LHDs understand and assess the factors that can impact community susceptibility and resilience to health emergencies. | <ul style="list-style-type: none">▶ Social Vulnerability Index (SVI)▶ Area Deprivation Index▶ Medically Underserved Area or Population (MUA/MUP)▶ Census Profile |

- **Community-level data and metrics** help LHDs understand and assess the factors that can impact community susceptibility and resilience to health emergencies.
 - **Social Vulnerability Index (SVI)** and **Area Deprivation Index** provide insights into social and economic factors impacting a community's ability to respond to outbreaks.
 - **Medically Underserved Areas/Populations (MUA/MUP)** data identify regions with limited access to healthcare resources.
 - **Census Profile** offers demographic data to understand community structure and potential disparities in outbreak response.

Community-Level Metrics

- In Table 1 of the guide, users can click on a specific metric. This will then take you to the section of the Appendix where the specific metric is defined in more detail.
- Row for each metric provides description and data source.
- Data Source column provides links to access public data sources when available.

Appendix 1: Equity Framework Data and Metrics Descriptions and Supporting Literature

| Community-Level Data and Metrics | | |
|--|---|--|
| Metric | Description | Data Source |
| Social Vulnerability Index (SVI) | <p>The CDC/ATSDR Social Vulnerability Index uses 16 U.S. census variables to help local officials identify communities that may need support before, during, or after disasters (Score of 0 lowest vulnerability, 1 highest vulnerability).</p> <p>“Social vulnerability refers to the potential negative effects on communities caused by external stresses on human health. Such stresses include natural or human-caused disasters, or disease outbreaks.”</p> | <p>CDC/ATSDR: SVI Interactive Map</p> <p>CMS Dashboard: Mapping Disparities by Social Determinants of Health</p> <p>User can search the CMS Dashboard for SVI within “Social and Community Context” domain drop down. User can search by county or census tract, then view map or download a data table to access data provided at census tract level.</p> <p>Note: User needs to know census tract of healthcare facility. There is a tool linked at the top of the CMS Dashboard page to find census tract using facility address.</p> |
| Area Deprivation Index | <p>The Area Deprivation Index (ADI) is based on a measure created by the Health Resources & Services Administration (HRSA) over three decades ago, and has since been refined, adapted, and validated to the Census block group neighborhood level. It allows for rankings of neighborhoods by socioeconomic disadvantage in a region of interest (e.g., at the state or national level).</p> | <p>https://www.neighborhoodatlas.medicine.wisc.edu/mapping</p> |
| Medically Underserved Area or Population (MUA/MUP) | <p>This designation of MUA or MUP is assigned to neighborhoods as a whole and not to individual portions of it.</p> | <p>HRSA Website: MUA Find Tool</p> <p>User can only search by state and county. Results are presented by neighborhood and further expansion (user can click + for drop down) also provides census GEOIDs within the MUA.</p> <p>Note: Only neighborhoods that are designated MUA/MUP will be listed. Designation dates should be noted as the information provided may be outdated.</p> |
| Census Profile | <p>Census profiles provide a variety of demographic data on a specific census tract (race/ethnicity breakdown, income/poverty, health care coverage, education, housing, etc.).</p> | <p>Data.Census.gov</p> <p>User can search by county, city, and census tract level. User can click on map to view profile of demographics for different census tracts.</p> |

Facility-Level Metrics

- **Facility-level data and metrics** focus on healthcare settings, assessing healthcare quality and structural capabilities to gauge a facility's outbreak preparedness.
- Includes proposed metrics for **all healthcare facilities**, as well as metrics specific to **nursing homes** and **hospitals**.

Facility Level

Facility-level data and metrics focus on healthcare settings, assessing healthcare quality and structural capabilities to gauge a facility's outbreak preparedness.

All Healthcare Facilities:

- ▶ [Facility Healthcare Setting](#)
- ▶ [Facility Bed Count](#)
- ▶ [Facility Bed Capacity/Utilization Rate](#)
- ▶ [Insurance Distribution of Patients \(e.g., % Medicare/Medicaid, % Private, etc.\)](#)
- ▶ [CMS Overall Rating](#)
- ▶ [Healthcare Personnel Vaccination Coverage for COVID-19](#)
- ▶ [Healthcare Personnel Vaccination Coverage for Seasonal Influenza](#)
- ▶ [Healthcare Personnel Vaccination Coverage for Additional Relevant Vaccines](#)
- ▶ [Facility Level of Stocked Personal Protective Equipment](#)

Specific to Nursing Homes:

- ▶ [Average Number of Residents per Day](#)
- ▶ [Staff Turnover](#)
- ▶ [Registered Nurse Hours \(per resident per day\)](#)
- ▶ [Resident Vaccination Coverage for COVID-19](#)
- ▶ [Resident Vaccination Coverage for Seasonal Influenza](#)
- ▶ [Percent of Short-Stay Residents Appropriately Given Vaccination for Seasonal Influenza](#)
- ▶ [Resident Vaccination Coverage for Additional Relevant Vaccines](#)

Specific to Hospitals:

- ▶ [Staffing Levels](#)
- ▶ [Hospital Infection Scores](#)
 - Central line-associated bloodstream infections (CLABSI) in ICUs and select wards
 - Catheter-associated urinary tract infections (CAUTI) in ICUs and select wards
 - Surgical site infections (SSI) from colon surgery
 - Surgical site infections (SSI) from abdominal hysterectomy
 - Methicillin-resistant Staphylococcus Aureus (MRSA) blood infections
 - Clostridium difficile (C.diff.) intestinal infections
- ▶ [Percent of ICU, NICU, and/or PICU beds currently occupied](#)

Outbreak-Level Metrics

- **Outbreak-level data and metrics** provide a real-time snapshot of the outbreak's status and impact, capturing data on case numbers, testing availability, and patient demographics necessary for a robust and immediate response.
- Metrics like **confirmed, probable, and suspected cases** give a snapshot of the outbreak's status in healthcare facilities.
- **Pathogen testing availability** is critical for timely diagnosis and containment.
- **Demographics** of outbreak cases help LHDs understand who is most affected and guide equitable resource distribution.

Outbreak Level

Outbreak-level data and metrics provide a real-time snapshot of the outbreak's status and impact, capturing data on case numbers, testing availability, and patient demographics necessary for a robust and immediate response.

Outbreaks in All Healthcare Facilities:

- ▶ [Number of Confirmed Cases](#)
- ▶ [Number of Probable Cases](#)
- ▶ [Number of Suspected Cases](#)
- ▶ [Pathogen Testing Availability](#)
- ▶ [Outbreak Case Demographics \(including but not limited to\):](#)
 - Gender Distribution
 - Age Distribution
 - Race and Ethnicity Distribution
 - Primary Language Distribution
 - Comorbidities Distribution

Specific to Hospital Outbreaks:

- ▶ [Percent of hospitalized patients that are confirmed cases](#)
- ▶ [Percent of ICU patients that are confirmed cases](#)

Applying the Equity Framework

Equity Framework for Outbreak Response and Prevention in Healthcare Settings

1. Systematically Collect Data and Metrics for Equity Indicators

- Surveillance and Monitoring Data for Outbreak Detection
- Standardized Data and Metrics for Equity Indicators

2. Analyze Data and Metrics to Inform Decisions

- Data Analysis and Data Sharing
- Informed Decision-Making

3. Develop Targeted Outbreak Interventions with an Equity Lens

- Infection Control Recommendations and Education
- Resource Allocation
- Culturally Competent Care and Communication
- Community Engagement
- Continuous Quality Improvement

Customizing Equity Indicators and Applying the Framework for Local Context

- Adapting to Population Needs
- Tailoring to Facility Capabilities
- Data Access/Granularity
- Evaluating and Modifying over Time

Use Cases in Implementing the Equity Framework

1. **Use Case:** Flu Outbreak Management Across Several Long-Term Care Facilities
2. **Use Case:** LHD Prevention Efforts for Respiratory Illness Season in Long-Term Care Facilities
3. **Use Case:** An LHD Conducting Outbreak Response at a Large, Urban Hospital
4. **Use Case:** A Regional LHD Conducting Outbreak Response in Healthcare Settings Across Multiple Counties

Use Case 2: LHD Prevention Efforts for Respiratory Illness Season in Long-Term Care Facilities

In the fall, the LHD is working to prepare for the upcoming respiratory illness season across the region's ten long-term care facilities.

The LHD conducting this prevention work is located in a medium-sized county with diverse communities across the jurisdiction.

Data and Metrics of Interest for Use Case 2

Community Level Metrics

- Social Vulnerability Index (SVI)
- Census Profile

Facility Level Metrics

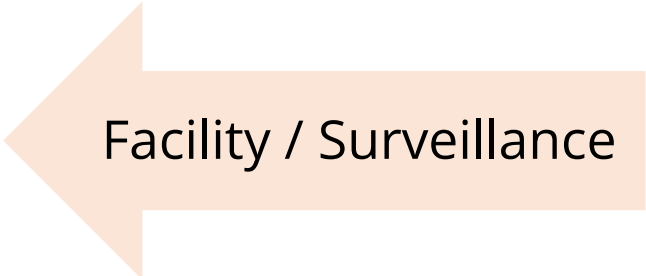

- CMS Overall Rating
- RN Nurse Hours (per resident per day)
- Nursing Staff Turnover
- Average Number of Residents per Day
- Healthcare Staff Vaccination Coverage
- Resident Vaccination Coverage

Public Websites

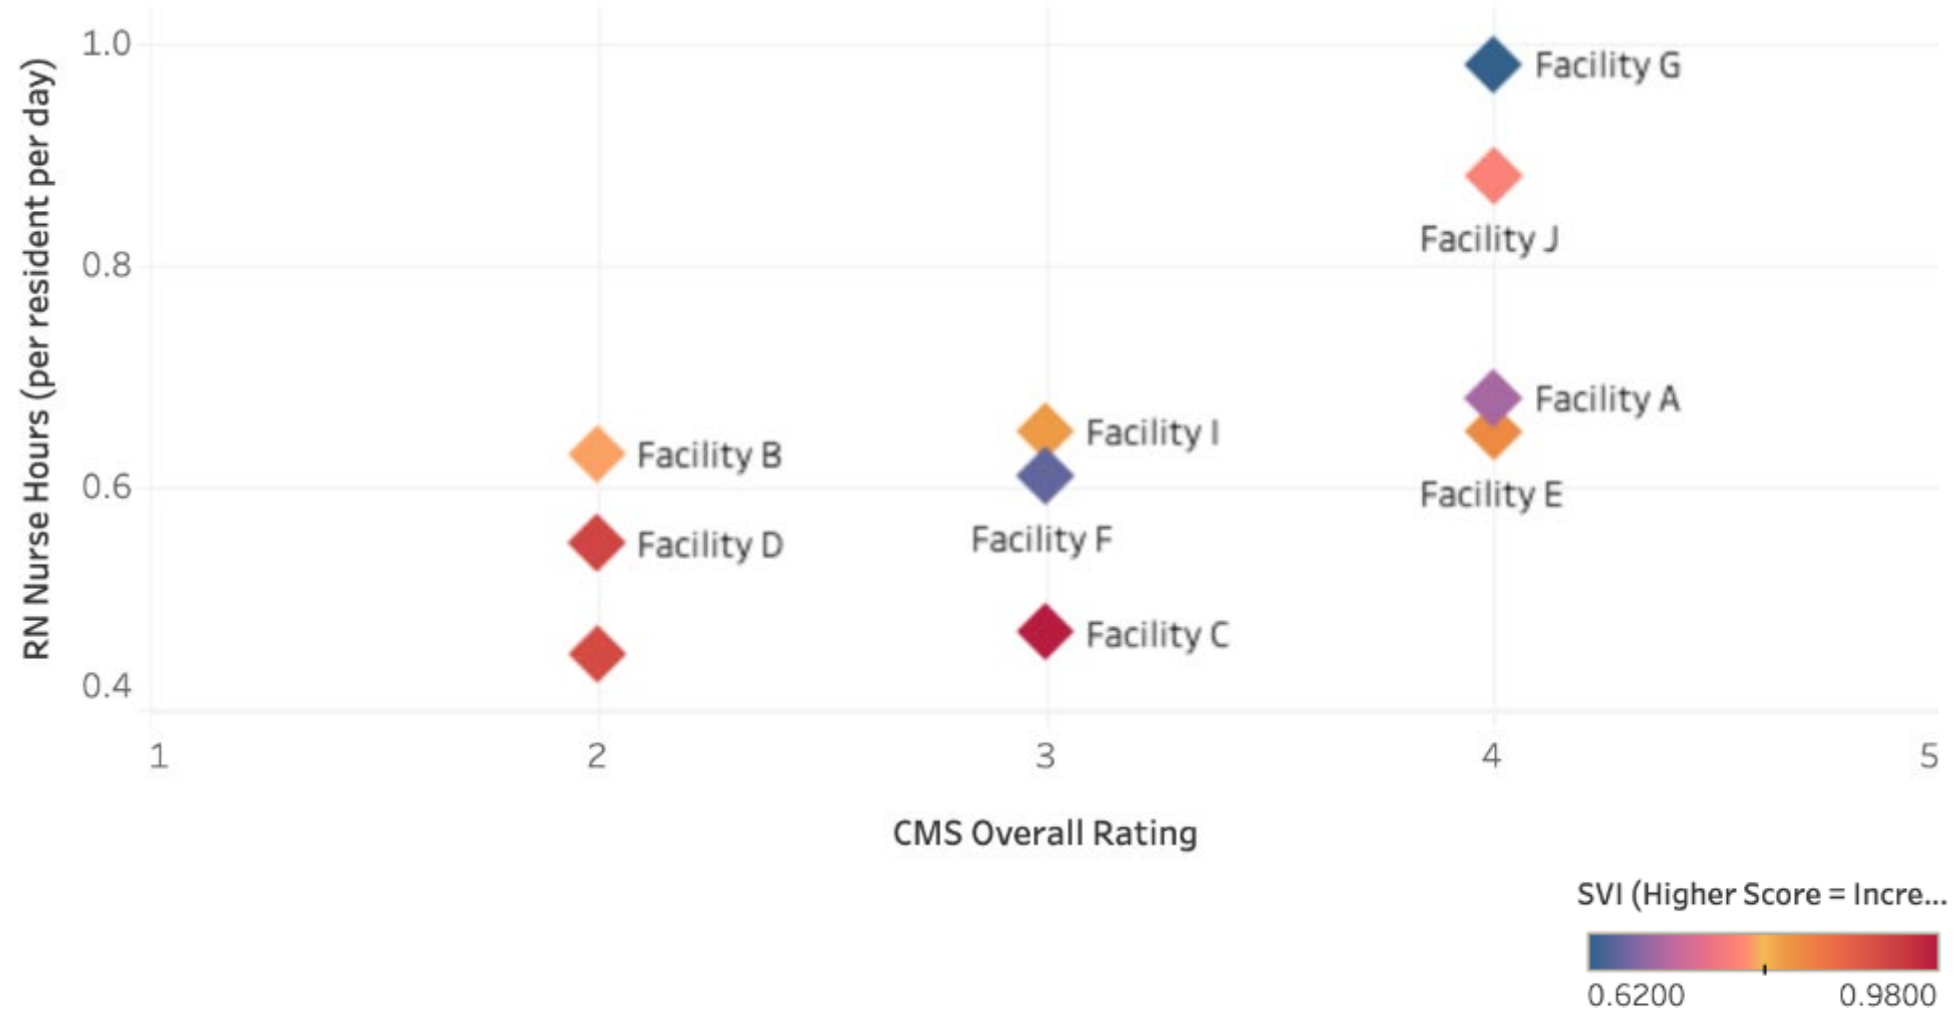

Facility Level Metrics

- Level of Stocked PPE
- Primary Language of Facility Staff

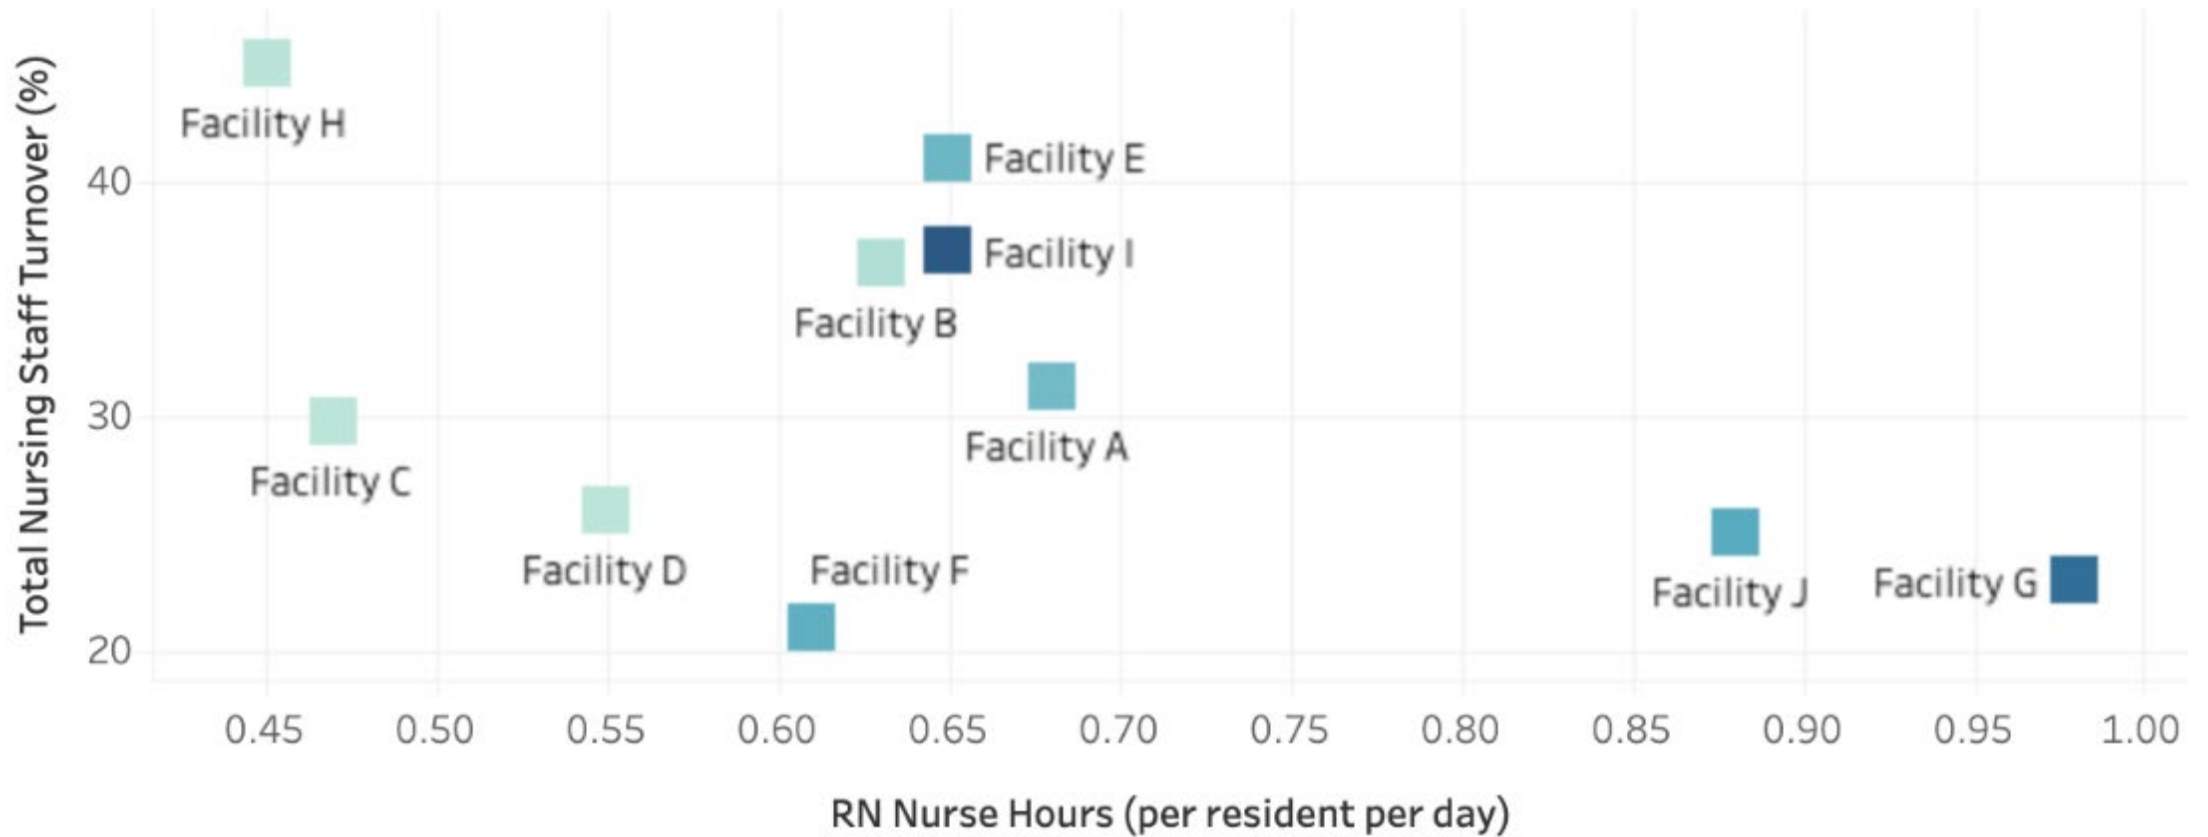

Facility / Surveillance

Use Case 2 Tableau Dashboard: Equity Indicators Comparison

Use Case 2 Tableau Dashboard: Staffing Metrics

HCP Flu Vaccination (%)
1.80 35.00

Use Case 2 Tableau Dashboard: Resource Allocation

Equity Framework for Outbreak Response and Prevention in Healthcare Settings

1. Systematically Collect Data and Metrics for Equity Indicators

- Surveillance and Monitoring Data for Outbreak Detection
- Standardized Data and Metrics for Equity Indicators

2. Analyze Data and Metrics to Inform Decisions

- Data Analysis and Data Sharing
- Informed Decision-Making

3. Develop Targeted Outbreak Interventions with an Equity Lens

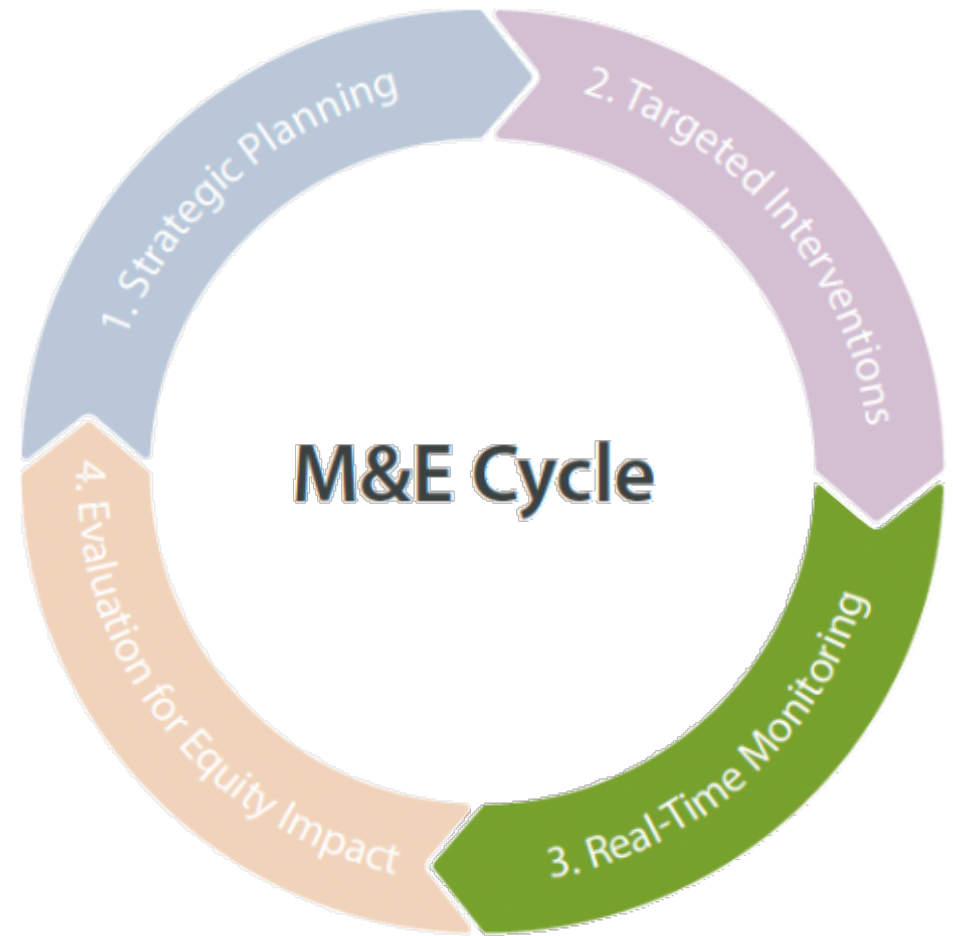

- Infection Control Recommendations and Education
- Resource Allocation
- Culturally Competent Care and Communication
- Community Engagement
- Continuous Quality Improvement

Monitoring and Evaluation (M&E)

3. Real-Time Monitoring

- ✓ Utilize Technology to Track Key Metrics
- ✓ Enable Swift Adjustments to Strategies as Needed

4. Evaluation for Equity Impact

- ✓ Analyze the Success of Interventions in Reducing Disparities
- ✓ Gather Feedback from Healthcare Facility
- ✓ Develop Comprehensive Reports and Share Findings

Additional Considerations

- ✓ Training and Capacity Building
- ✓ Policy and Advocacy

Key Takeaways

- ✓ This guide emphasizes the importance of applying the Equity Framework in outbreak response and prevention to address health disparities, customize interventions based on local context, and ensure equitable resource allocation.
- ✓ Community-level and facility-level metrics, such as the Social Vulnerability Index (SVI) and CMS ratings, are pivotal for identifying high-risk populations and prioritizing intervention efforts effectively.
- ✓ Success stories shared by LHDs in the Data Utilization and Strategic Collaboration guides provide best practices for enhancing outbreak response and prevention work. Incorporating these practical strategies can support the implementation of equity-focused data strategies.
